### High Performance Wide Band Antennas High Performance Ultra Wide Band Antennas

High Performance Wide Band antennas and High Performance Ultra Wide Band antennas have been developed in order to help all our Customers that need to increase the link capacity but cannot add a new pair of antennas, for instance where there is not enough space on the towers. In those cases, in fact, our “standard narrow band” feeders, already installed, can be substituted by the new WB or UWB ones.

These new antennas are available in both single and dual polarization version, with diameters from 2.0m up to 3.7m.

*Other feed systems and antennas, in different frequency ranges, can be designed under request. Please do not hesitate to contact us for further details.*
